#### **Defect Details**

| NC No.                | 8000899141                            |
|-----------------------|---------------------------------------|
| NC Date               | 14/11/2024                            |
| NC Submission Date    |                                       |
| Part No.              | F2PA00202B                            |
| Part Name             | BOTTOM CASE RING RE J1A               |
| Supplier Name & Code  | 100990-JAIRAJ ANCILLARIES PVT LTD     |
| ETL Plant             | 1117-ETL K-228/9 Suspension           |
| <b>Defect Details</b> | NOT AS PER SPECIFICATION-CRACK/BROKEN |

# 1. Problem Description

| <b>Defect Description</b> | CRACK/BROKEN                 |
|---------------------------|------------------------------|
| <b>Detection Stage</b>    | Inprocess                    |
| Problem Severity          | Fitment                      |
| NG Quantity               | 44                           |
| Is Defect Repeatative?    | Yes                          |
| Defect Sketch / Photo     | xd0zclmakc4kyvvbxutjlf4r.jpg |

## **Supplier Communication Details**

| Quality Head Email ID planthead.aurangabad@jairajgroup.com |                       |
|--|-----------------------|
| Plant Head/CEO Email ID                                    | vp@jairajgroup.com    |
| MD Email ID  | rajiv@jairajgroup.com |

## 2. Stock Details & action taken for NG parts

| Location  | ETL End | Warehouse | Transit | Supplier FG | Supplier WIP | Total |
|-----------|---------|-----------|---------|-------------|--------------|-------|
| Total Qty | 1000    | 0         | 0       | 225         | 0            | 1225  |
| Check Qty | 1000    | 0         | 0       | 225         | 0            | 1225  |
| NG Qty    | 44      | 0         | 0       | 12          | 0            | 56    |

#### Action taken on NG part

| Scrap           | 56 |
|-----------------|----|
| Rework          | 0  |
| Under Deviation | 0  |

#### **Containment Action**

Checked all available stock of 1000 no. at ETL end 100% and found 44 no. defective parts. Checked 100% all inhouse FG stock available 225 no. and found 12 no. defective parts

#### 3. Process Flow

# Process Flow Description Annealing

#### 4. Process Details

| Process / Operation | Annealing      |
|---------------------|----------------|
| Outsource           | No             |
| Machine / Cell      | Annealing Tank |
| Machine / Cell No.  | ANL -01        |

# 5. Problem Analysis

| Туре     | Possible Cause   | Fact Verification  | Jud |
|----------|--|--|-----|
| Material | RM Grade not as per CP . Check with  | Check with MTC & found ok as per specification   | 0   |
| Machine  | Barrel Temp High / Low   | Verified as per Cp & OCS found ok , As per Standard Specification                        | 0   |
| Tool     | Air trapped & air vent inefficient open                                    | Verified the air vent and found ok   | 0   |
| Method   | Annealing surface volume in tank in sufficient to dip the parts in medium. | Verified and found due to small tank top parts are getting float in medium .             | X   |
| Method   | RM preheating not done   | Verified as per CP & OCS found ok , As per Standard Specification                        | 0   |
| Man      | Man Power does not aware about this defect .                               | Verifed that operator , In process inspector & Final Inspector aware about this defect . | 0   |
| Machine  | OCS & control plan not followed by Machine Operator .                      | Verified as per Cp & OCS found ok  | 0   |

# 6. Inspection Method Analysis (Current)

| Inspection Method               | Other    |
|---------------------------------|----------|
| Other Inspection Method         | Visually |
| Check Point at Final Inspection | Yes      |
| Checking Freq.                  | Sampling |
| Sampling                        | No       |
| Sample Size                     | 5        |

# 7. Root Cause Analysis (Occurance)

| Why 1  | Parts are getting broken erratically on weld line surface.                |  |  |
|--|---|--|--|
| Why 2  | Parts are not getting fully dipped in annealing medium                    |  |  |
| Why 3  | Due to parts are getting floated above the medium surface                 |  |  |
| Why 4  | Due to Annealing tank size small , parts surface not completely annealed. |  |  |
| Why 5  |   |  |  |
| Root Cause (Occurance)  Due to Annealing tank size small, top parts surface not completely annealed resulting into insufficient annealing. Due to Annealing tank size small, parts surface not completely annealed resulting in breakages erratically. |   |  |  |

## Root Cause Analysis (Outflow)

| Why 1 | Parts are getting broken erratically on weld Line surface.                 |  |
|-------|--|--|
| Why 2 | Parts are getting skipped from Operator and Final Inspector                |  |
| Why 3 | After annealing process , parts are getting checked on sampling Inspection |  |

| Why 4                | Lack of awareness of highlighted defect. |
|----------------------|--|
| Why 5                |  |
| Root Cause (Outflow) | Lack of awareness of highlighted defect. |

# 8. Countermeasure ( Occurrence , Outflow & System side Actions )

| Туре   | Countermeasure Details  | Responsibility | Target Date | Actual Date | Status    |
|--|---|----------------|-------------|-------------|-----------|
| Occurance Annealing record Register monitoring started |   | Ganesh mhaske  | 22/11/2024  | 22/11/2024  | Completed |
| Occurance  | Big Annealing tank to Incorporate so that max parts are getting covered in one annealing cycle. | Ganesh Mhaske  | 26/11/2024  | 27/11/2024  | Completed |
| Outflow  | Awareness training given to in process inspector & Final Inspector about highlighted defect .   | Sandeep Rode   | 22/11/2024  | 22/11/2024  | Completed |

# 9. Inspection Method After Customer Complaint

| Change In Inspection System        | Yes   |
|------------------------------------|---|
| Change Details                     | 100% Visual Inspection for part softness after annealing. |
| Inspection Method                  | Other   |
| Other Inspection Method            | Visual  |
| Check Point at Final<br>Inspection | Yes   |
| Checking Freq.                     | 100%  |
| Sampling                           | No  |
| Sample Size                        | 100%  |

## 10. Evidance of Countermeasure

| Occurance (Before) | Earlier small Annealing tank does not cover part max occupancy per cycle . Parts are getting open in medium due to floating on surface at top side which may be the probable cause .  1224_Occurance_Before.pptx |
|--------------------|--|
| Occurance (After)  | Now Big Size Annealing tank implemented so that max parts are covered per cycle. Annealing Monitoring record started. 1224_Occurance_After.pdf   |
| Outflow (Before)   | Earlier Parts Softness & ductility after annealing process was checked at sampling basis.  1224_Outflow_Before.pdf   |
| Outflow (After)    | Parts softness and Ductility checking with 100% Inspection with OJT to In process and Firewall Inspectors.  1224_Outflow_After.pdf   |

## 11. Horizontal Deployment

| Horizontal Deployment<br>Required     | No |
|---------------------------------------|----|
| Applicable Machine /<br>Model / Plant | NA |

#### 12. Document Review

| Documents              | ControlPlan, PFMEA, WISOP |
|------------------------|---------------------------|
| Specify Other Document | NA                        |

## 13. Effectiveness Of Action

| Reviewed Quantity     | 50 |
|-----------------------|----|
| Reason for submission | ОК |
