Relying on the rich experienced technical teams, good quality machine part supplier and heart to heart sales service, our products win satisfaction from many customers spread the world. The application of machine involve in electronic, medical, plastic, textile and packing industry.

Hi-Link Printing Technologies will be your reliable and professional printing solution consultancy. Let's hand in hand to create brilliant future together. Choose to cooperate with us; we will keep providing good quality machine and service as per your requirement.

Supplying supreme quality range of rubber profiles. These rubber profiles are available in different shapes, sizes, grades and dimensions as per the specifications that are laid by the customers. These are widely used as fixtures to absorb shocks and protect glasses of doors and windows to fall. Our range includes building rubber profile, EPDM rubber profile, rubber O ring, rubber gaskets and many more. which are involved in manufacturing supreme quality range of rubber beading. This rubber beading is available with us in different sizes and dimensions according to the specifications that are laid by the customers. Our product range is highly appreciated amongst customers for its high strength and wide used in different industries. Furthermore, to attain the maximum satisfaction of the customers, we provide this rubber beading at most economical price.

Our organization is proud to present a high quality range of Pad Printing Machines that are suitable to present clear marking instead of using stickers. Using these machines, the printing quality gets improved and production also gets augmented. Relying on the latest printing technology, these machines are used in major industries like medical, automotive, promotional, apparel, toys, electronic goods, crockery and other materials also. The working of these machines is accomplished by using silicone pads that pick up the image from variant surfaces. The printing process only gets completed when the image gets transferred from cliché to substrate passing through the pads. The machines are used in the area where printing on uneven surface is difficult.

We have appointed a diligent Team of highly specialized professionals and technicians having excellent industry experience. We offer an efficient customer service backup providing wholehearted and complete support. Further, we are a fast growing company with a splendid sales volume serving our customers with reliability and integrity; providing high rate of satisfaction and trust among our renowned clients.
