- ◆ Ultrasonic Testing Thickness measurement
- ◆ Production automation

EMERGENCY ACTION PLAN

The Emergency Action Plan (EAP) is in place to ensure employee safety from fire and other emergency. At the time of an emergency, all employees should know what type of evacuation is necessary and what their role is in carrying out the plan. In some emergencies total and immediate evacuation will be necessary. In other emergencies only partial evacuation may be necessary.

When a fire is detected it is necessary that the fire alarm pull station be activated as soon as possible. The fire alarm will notify the emergency response team who will perform assigned duties. The activation of the alarm will also notify the local fire department.

It is of critical importance that all employees and visitors are accounted for.

in the event of Weather emergencies all employees (and visitors) are to evacuate their assigned area and reports to the lower level bomb shelter. Again, it is of critical importance that all employee and visitors are accounted for.
