

How to achieve the 5-star energy rating

There are many design features that can contribute to the minimum standard for units, including:

- northern orientation of living rooms
- natural ventilation through windows and doorways
- shading with wider eaves and awnings
- insulation in roof space and walls
- high-performance glazing
- light-coloured roofs and walls
- ceiling fans in living areas and bedrooms
- Well-designed outdoor living areas.
- Use Five Star Equipment's used

The design must account for the climate of the area where the unit is located. Read more
