

No fire Incident in last two years

It is declare that, no fire or any kind of accident happened in our premises or where we are working.

We follow the safety rules as mentioned by safety officer of our company and law of land

We follow following procedure before starting any work at the place.

1. Phase 1: Identification of Hazard

In this phase all possible incidents are determined and catalogued. Field visit and study of all procedures related to Operations and Input documents like Drawings and Process write-up are used in identification of Hazards.

2. Phase 2: HIRA Risk Assessment

Inputs Needed

Work environment is highly dependent on the availability and accuracy of the input data, When provided with complete Input data, a higher confidence on the validity and robustness of the results are obtained. The example of data collection will be specific to operations, building design, personnel / population occupancy levels.
