## \_\_\_\_\_ Practical Observations \_\_\_\_\_

### ➤ RHOMBERG TEST

Exercise: Ask patient to stand with his feet closing approximated position. First ask to stand with open eyes and then with closed eyes.

Observations: If you observed unsteadiness in the position of patient then the Rhomberg Test is positive.

### ➤ TANDEM WALKING

Exercise: First draw a straight line on floor, then ask patient to walk on straight line by placing one heel directly in front of opposite toes with eyes open and closed.

Observations: If you observe sways or staggers then Tandem Walking Test is positive.

### ➤ FINGER NOSE TEST

Exercise: In this Test ask patient to extend and abduct the arms completely and then touch the index finger tip to the tip of his nose. First slowly and then capacity.

Observations: If more irregularities are observed as finger approaches the nose or patient may stop before he touches the tip of nose then finger nose test is positive.
