

PROCEDURE FOR AC WORKING

1. reparing for panel ac

2. reparing for split ac

Procedure for panel ac

1. if found problem in panel ac first we have to check at machines location

2. if problem is not getting solved then maintainace team will disconnect the

Supply of it

3. then we will dismental panel ac from machine and will bring it

To ac reparing area

4. then we will check wheater the compressor if working or not

Whether ac having gas or not whether its motor is working or not

Whether its controller has burned or accoseries has burn of compressor

5. when work is completed the trail is taken at ground afterwards

Ac wil get install to panel machine

6. Maintainace team will give supply for it and then report will get ready for

That work and will take sign after trail given to person of maintainace

2. procedure for split ac

1. if found problem in split ac first he removes supply

2. he wil check electrical accoseries and fan motor gas pressure

Whether compressor problem

3. then will report to department or else if possible by servicing he will done
